lists of facts, Wikibooks is made up of linked chapters that aim to teach the reader about a certain subject.

## **Manual Transmission Fluid Change**

Transmission fluid lubricates the components inside your vehicle's transmission, and you may need to change the fluid out if your gears aren't shifting correctly or there's rattling under the hood. Transmission fluid usually needs to be changed out every 30,000-60,000 miles (48,280-96,560 km).

## **How to Change Transmission Fluid: 10 Steps (with Pictures)**

A transmission fluid change is, as you would expect, when you have the fluid in the transmission system replaced. In a manual transmission system the fluid tends to become contaminated over time, with the wear and tear of the various components causing some debris to fall into the fluid.

A transmission is a machine in a power transmission system, which provides controlled application of power. Often the term 5-speed transmission refers simply to the gearbox, that uses gears and gear trains to provide speed and torque conversions from a rotating power source to another device.. The term transmission properly refers to the whole drivetrain, including clutch, gearbox, prop shaft ...
