## **Picc Line Observation Documentation**

Overview A peripherally inserted central catheter (PICC), also called a PICC line, is a long, thin tube that's inserted through a vein in your arm and passed through to the larger veins near your heart. Very rarely, the PICC line may be placed in your leg. A PICC line gives your doctor access to the large central veins near the heart.

A PICC (peripherally inserted central catheter) is a type of catheter, normally inserted in the upper arm. A PICC line is a safe, stable way to deliver intra-venous (IV) medications. It can stay in the body for weeks or months, alleviating the need to subject your veins to the numerous needle sticks necessary if the PICC was not there.
