a button. Both types of ignitors generate a hot spark that lights the grill, but they create the spark in different ways.

Piezoelectric starters generate one spark per push.

My Gas Grill Ignitor Is Not Working | Hunker

Quartz is piezoelectric, which means that it creates a voltage when deformed. This sudden forceful deformation produces a high voltage and subsequent electrical discharge, which ignites the gas. No external electric connection is required, though wires are sometimes used to locate the sparking location away from the crystal itself.

Piezo ignition - Wikipedia

Problems With The Spark Ignition Switch The spark switch initiates ignition by sending an electric current to the spark module. The switch may get shorted due to moisture, electricity upsurge or various other reasons. A damaged ignition switch

Why is My Igniter Not Working? | Tips & Techniques | Weber ...

It's simple to check. Just lift off the cap and burner head and reposition them, paying close attention to the alignment marks. If the clicking continues, repeat until you've repositioned all of the burner heads and caps on your cooktop. The sound should stop once you've corrected the last misaligned burner.

Why Won't Whirlpool Cooktop Igniters Stop Clicking? | Hunker

The piezo creates a hard snap. This type of ignition was used on older Weber, DCS and Viking Grills. Unscrew the cap on the battery spark generator and check the battery. The environmental elements can corrode the battery inside and damage the internal working of the spark igniter causing it to stop working.
